Landforms

I can see trees and elephants on the **plain**.
There are five elephants on the **plain**.

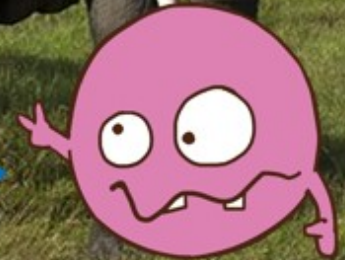

A **plain** is a large, flat area of land. Many animals live on **plains**.

How many elephants do you see on the plain?

I see four elephants on the plain.

Pre-Reading

What different kinds of land can you find near you?

Landforms on Earth

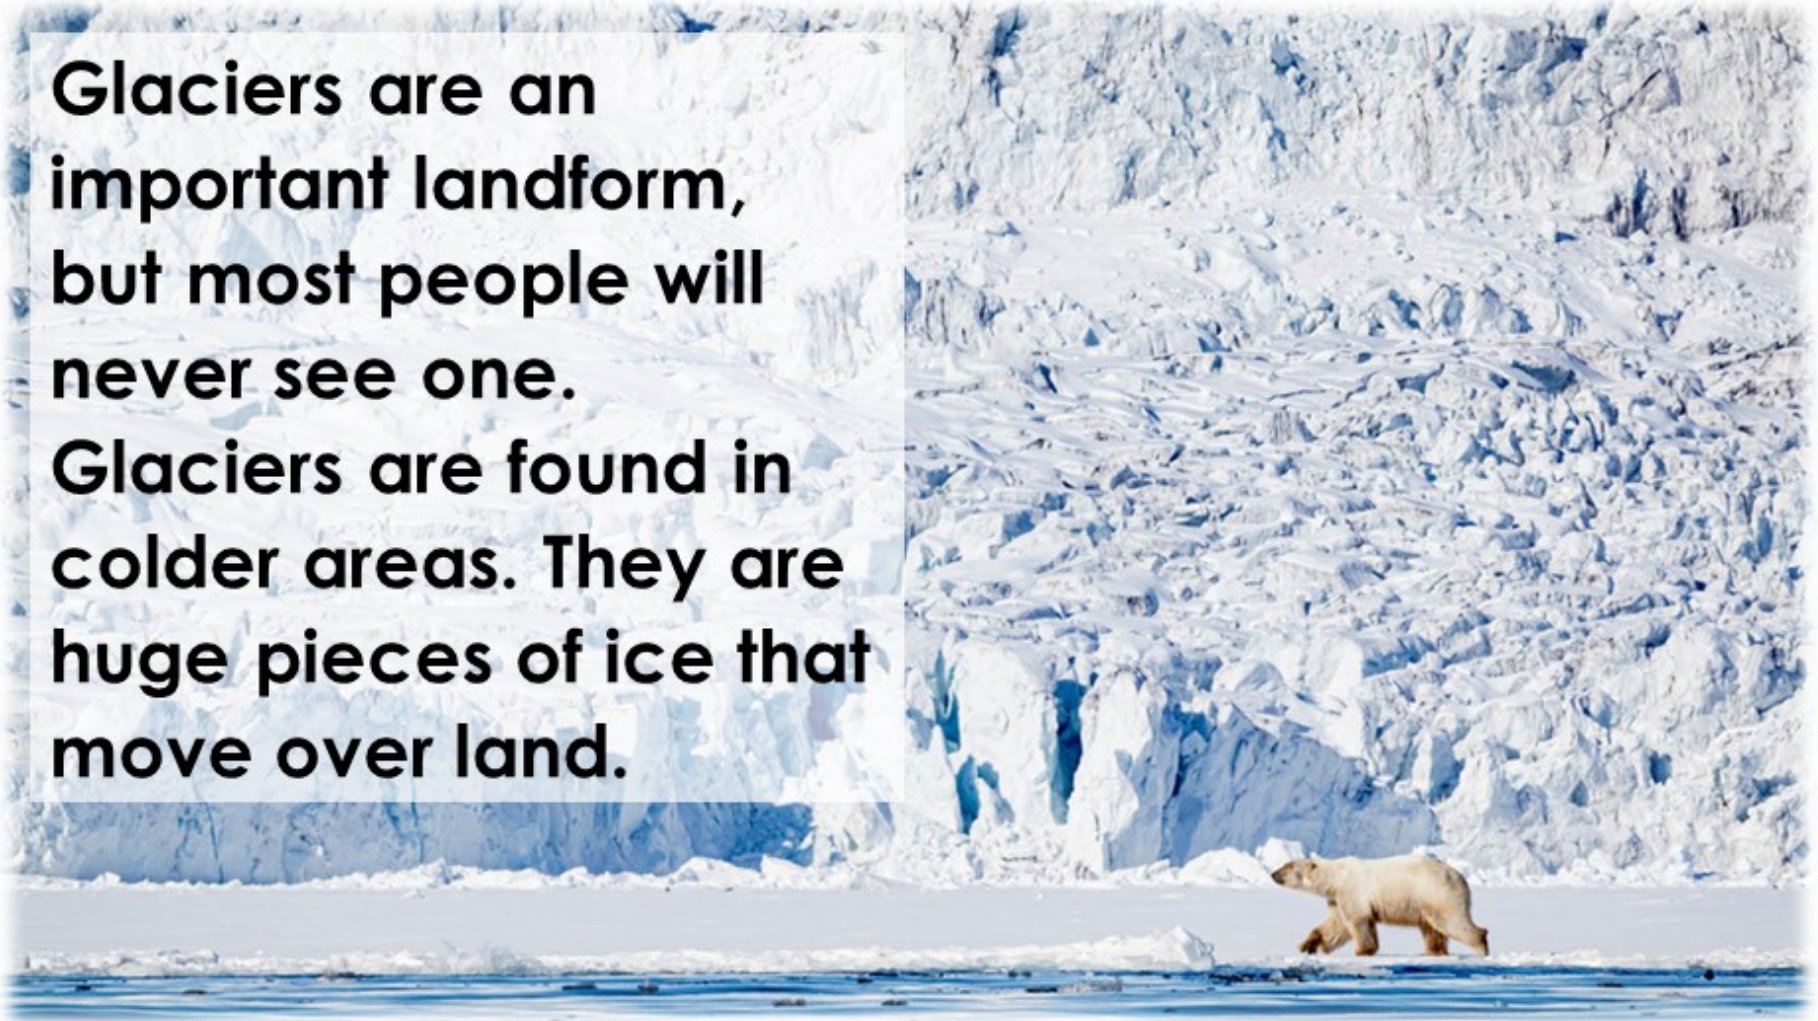

One interesting landform is a valley. A valley is a low area of land that is between mountains. Sometimes there may be a river flowing through the valley.

Landforms on Earth

Glaciers are an important landform, but most people will never see one.

Glaciers are found in colder areas. They are huge pieces of ice that move over land.

Landforms on Earth

An island is another type of landform. Islands are surrounded by water. Some islands have mountains, valleys, and cliffs. Most people love islands, especially islands with beaches on them.

Reader Detective

- 1 Do many people live on glaciers?
- 2 Do you think an island would be a good place to live on? Why or Why not?

Do you know?

**What animals live on plains?
Why do they live on plains?**
